Craig/Wren - wanted to give you a heads up that air monitoring teams recorded elevated readings of 1-3-butadiene this evening around 5:00 pm. UC recommend a shelter in place for the local area, but at 6:00 the County Judge decided to extend it to all of Port Neches until 6:00 am.

This is a fluid situation and I'll update as I hear more.

Below is an excerpt I just pulled from the news.

Bryant

FYI - from Beaumont Enterprise:

From Unified Command for Port Neches residents:

"Due to the current wind conditions and on-going activities at the TPC site, there are elevated levels being measured for 1.3-Butadiene. As a precaution, we are recommending sheltering in place until 6 a.m. in the morning. The situation will be evaluated throughout the night."
